

## How to Add the Collibra Browser Extension

The Collibra Browser Extension allows you to quickly search for definitions of business terms, to view report details, and much more from any web page against the Collibra Data Intelligence environment. One powerful way to use this extension is with a business intelligence (BI) tool such as Power BI. The extension can automatically identify the document on which you are working and show you the information about that document in a single click.

1. To learn more about the extension and if it is a feature you would like to use, visit [Collibra Documentation](#).
2. To add the extension in a Chromium-based browser such as Google Chrome or Microsoft Edge, visit [Add the Browser Extension to Your Browser](#).
3. After adding the extension, configure it by adding the address of UNCG's Collibra Platform URL (<https://uncg.collibra.com>). If you use Power BI, or another BI tool, add its URL as a domain in the extension. For detailed steps, visit [Configure the Browser Extension](#).
4. To ensure the extension is visible in your browser toolbar, pin the Collibra Browser Extension to your extension list (visible in the top right corner of the browser). [Collibra Documentation](#) provides details with images.
5. To use the extension with your configured BI tool, go to the configured BI tool's URL. The Collibra Browser Extension logo should appear in your toolbar in the top right corner of the browser and as a Collibra logo overlay directly on the web page. This overlay can be moved around the web page, and to search Collibra, click on the overlay to start.
